

## Basic Area and Perimeter

A. Find the perimeter (P) and area (A) for the figures below.

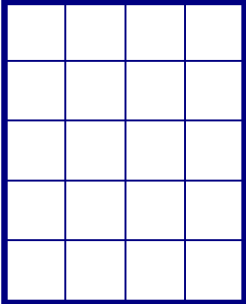

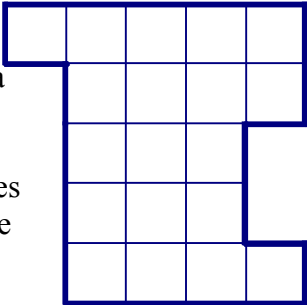

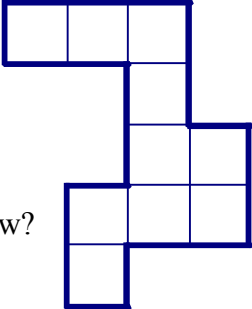

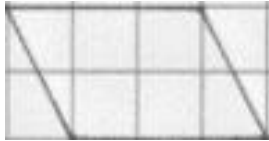

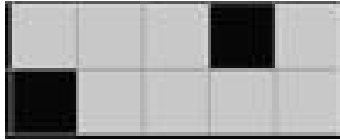

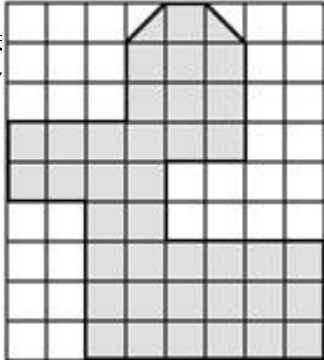

<p><b>1.</b></p>  <p>P = 18 units A = 20 units<sup>2</sup></p>	<p><b>2.</b></p>  <p>P = 22 units A = 19 units<sup>2</sup></p>	<p><b>3.</b></p>  <p>P = 20 units A = 10 units<sup>2</sup></p>
<p><b>4.</b></p>  <p>P = XX A = 4 wholes + 4 parts = 6 units<sup>2</sup></p>	<p><b>5.</b></p>  <p>P = 16 units A = 8 units<sup>2</sup></p>	<p><b>6.</b></p>  <p>P = XX A = 38u<sup>2</sup></p>

B. Draw the shape that meets the requirement.

<p><b>1.</b> Area of 4 with maximum perimeter.</p> <p style="text-align: center; font-size: 1.2em;">4 x 1</p>	<p><b>2.</b> Perimeter of 20 with minimum area.</p> <p style="text-align: center; font-size: 1.2em;">1 X 9</p>	<p><b>3.</b> Area of 9 with minimum perimeter.</p> <p style="text-align: center; font-size: 1.2em;">3 x 3</p>

## Probability

A. Find the probability for each figure as a fraction, decimal, and percent.

<p><b>1.</b> What is the probability a bird would land on one of the squares in the top row? —</p>  <p>Prob. = <math>4/20 = \frac{1}{5} = .2 = 20\%</math></p>	<p><b>2.</b> What is the probability a bird would land on one of the squares in the middle column? —</p>  <p>Prob. = <math>5/19 = .26 = 26\%</math></p>	<p><b>3.</b> What is the probability a bird would land on one of the squares in the middle row? —</p>  <p>Prob. = <math>2/10 = 1/5 = .2 = 20\%</math></p>
<p><b>4.</b> What is the probability a bird would land on one of the squares in the parallelogram?</p>  <p>Prob. = <math>6/8 = \frac{3}{4} = .75 = 75\%</math></p>	<p><b>5.</b> What is the probability a bird would land on one of the squares black squares?</p>  <p>Prob. = <math>2/10 = 1/5 = .2 = 20\%</math></p>	<p><b>6.</b> What is the probability a bird would land on one of the shaded squares?</p>  <p>Prob. = <math>38/72 = 19/36 = .53 = 53\%</math></p>
