

Trigonometry 2
Geometry

Give the six trigonometric ratios for the followings triangles.

Use $\triangle MNP$ to name the hypotenuse, opposite side, and adjacent side for each reference angle.

5) $\angle N$

6) $\angle M$

Use $\triangle JKH$ to name the hypotenuse, opposite side, and adjacent side for each reference angle.

7) $\angle K$

8) $\angle H$

Use $\triangle QRS$ to find each trigonometric ratio. Then use a calculator to approximate each ratio to four decimal places.

9) $\frac{\text{Opposite} \angle S}{\text{Hypotenuse}} =$

10) $\frac{\text{Adjacent} \angle S}{\text{Opposite} \angle S} =$

11) $\frac{\text{Hypotenuse}}{\text{Adjacent} \angle Q} =$

12) $\frac{\text{Opposite} \angle Q}{\text{Adjacent} \angle Q} =$

In the figure at the right the ratio $\frac{\text{Hypotenuse}}{\text{Adjacent} \angle A} = \frac{25}{24}$.

13) If $AC = 75$, find lengths AB and BC .

14) If $AB = 48$, find lengths BC and AC .

In the figure at the right the ratio $\frac{\text{Opposite} \angle P}{\text{Hypotenuse}} = \frac{5}{13}$.

15) If $PQ = 65$, find lengths PR and QR .

16) If $PR = 72$, find lengths PQ and QR .
