

Linear Equations 2.3

Geometry

Use a t-table to find the x and y-intercepts and one other solution of the following equations. Graph the equations, label the points, and give the slope of the graph.

1) $x - y = -1$

2) $2y = x - 4$

3) $2x - 3y = 5x + 15 - 3x$

4) $3x - 3 = y$

5) $5y + 10x = 15$

6) $x = -1$
